Example 10.10 *Estimate the value of the following perpetuity:*

A perpetuity that pays \$1000 annually, with the first payment occurring one year from today. The interest rate is 10%.

Solution: The value of the perpetuity is \$10,000. The perpetuity is a series of payments that continues forever. The value of the perpetuity is the sum of the present values of all the payments. The present value of the first payment is \$1000 / 1.10 = \$909.09. The present value of the second payment is \$1000 / 1.10² = \$826.45. The present value of the third payment is \$1000 / 1.10³ = \$751.31. The present value of the fourth payment is \$1000 / 1.10⁴ = \$683.01. The present value of the fifth payment is \$1000 / 1.10⁵ = \$620.92. The present value of the sixth payment is \$1000 / 1.10⁶ = \$563.75. The present value of the seventh payment is \$1000 / 1.10⁷ = \$511.67. The present value of the eighth payment is \$1000 / 1.10⁸ = \$464.56. The present value of the ninth payment is \$1000 / 1.10⁹ = \$421.91. The present value of the tenth payment is \$1000 / 1.10¹⁰ = \$382.64. The present value of the eleventh payment is \$1000 / 1.10¹¹ = \$347.86. The present value of the twelfth payment is \$1000 / 1.10¹² = \$316.23.
